AS ~ ARCHITECTURAL SHADECLOTH

UVE GRADINGS

AS4174: 2018 KNITTED AND WOVEN SHADE FABRICS

Standards Australia have released a rating system for knitted shade cloth and woven shade fabrics. The ratings are based on human protection effectiveness. There are 3 categories in the ratings based on UVE protection factors.

UVE %	PROTECTION CATEGORY
80% - 90.9%	Effective (E)
91% - 94.9%	Very Effective (VE)
95% +	Most Effective (ME)

Fabrics with results under 80% UVE are not considered suitable for human protection.

IMPORTANT NOTE:

When shade fabric is used for purposes such as shade structures for human protection, the ultraviolet effectiveness (UVE) may not be an accurate guide to the protection provided and may be less than the measured value due to variations in design, height and size of shade structures, stretching of the fabric, the distance of the fabric from the persons, the direction of sunlight, and the physical location of the persons within the shade structure (e.g. At the edge or at the centre).

AS - ARCHITECTURAL SHADECLOTH

The Architectural Shade Fabrics on the following pages are **SUITABLE** for use in tensioned Shade Sails & Structures.

LIGHT: Up to 300 gsm

SOLARBLOCK

EXISTING STOCK ONLY

Solarblock has a 'z' knit pattern similar to Z16. It has a modern colour palate and a 12 Year Warranty.

SHADECLOTH FASTENING SYSTEMS

SHADEFIX – Australian Made

SHADEFIX is ideal for use on timber or metal frames. Shadefix Galvanized Metal Strips are 600mm long and are simply nailed, screwed or riveted continuously to the perimeter of a frame or pergola and the Shadecloth fits onto the metal prongs and can be adjusted to the desired tension.

Shadefix enables the Shadecloth to be removed or replaced if required.

Shadefix Galvanized Metal Strips can be used on their own or can be used with the PVC "Paintable" Cover Strips and Corners for a neat professional appearance.

NOTE : Cover Strip must be fitted first if it is required
